

# **TUGAS PRAKTIKUM KONSEP PEMROGRAMAN**

## **JILID 12 part 3**

**Oleh :**

**Nama : Rosi Arif Mulyadi**

**NRP : 3121522021**

**Prodi : D3 Teknik Informatika PENS PSDKU Sumenep**

**Kelas : 1 ITA D3 Sumenep**

**Dosen :**

**Lusiana Agustien M.Kom**

**POLITEKNIK ELEKTRONIKA NEGERI SURABAYA**

## Praktikum 8 (3/4)

### POINTER

Untuk setiap program di bawah ini, – gambarkan ilustrasi alokasi memori dari setiap baris pernyataan yang diproses – perkirakan hasil eksekusinya

#### 1. Array of Pointer to char

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
main()
```

```
{
```

```
    static char *days[] = {"Sun", "Mon", "Tues", "Wed", "Thu", "Fri", "Sat"};
```

```
    int i;
```

```
    for( i = 0; i < 6; ++i )
```

```
        printf( "%s\n", days[i]);
```

```
}
```

Jawab :

| Konstanta | Address | Value |
|-----------|---------|-------|
|           | 1000    | S     |
|           |         | u     |
|           |         | n     |
|           |         | \0    |
|           | 1001    | M     |
|           |         | o     |
|           |         | n     |
|           |         | \0    |
|           | 1002    | T     |
|           |         | u     |
|           |         | e     |
|           |         | s     |
|           |         | \0    |
|           | 1003    | W     |
|           |         | e     |
|           |         | d     |
|           |         | \0    |
|           | 1004    | T     |
|           |         | h     |
|           |         | u     |
|           |         | \0    |

|          | 1005    | F     |
|----------|---------|-------|
|          |         | r     |
|          |         | i     |
|          |         | \0    |
| Variabel | Address | Value |
| days     | 2000    | 1000  |
|          |         | 1001  |
|          |         | 1002  |
|          |         | 1003  |
|          |         | 1004  |
|          |         | 1005  |

Output :

```

D:\Pointer Baru1\bin\Debug\Pointer Baru1.exe
Sun
Mon
Tues
Wed
Thu
Fri
Process returned 0 (0x0) execution time : 0.063 s
Press any key to continue.

```

2. Pointer yang menunjuk ke pointer yang lain.

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
main()
```

```
{
```

```
    int a, *b, **c;
```

```
    a = 155;
```

```
    b = &a;
```

```
    c = &b;
```

```

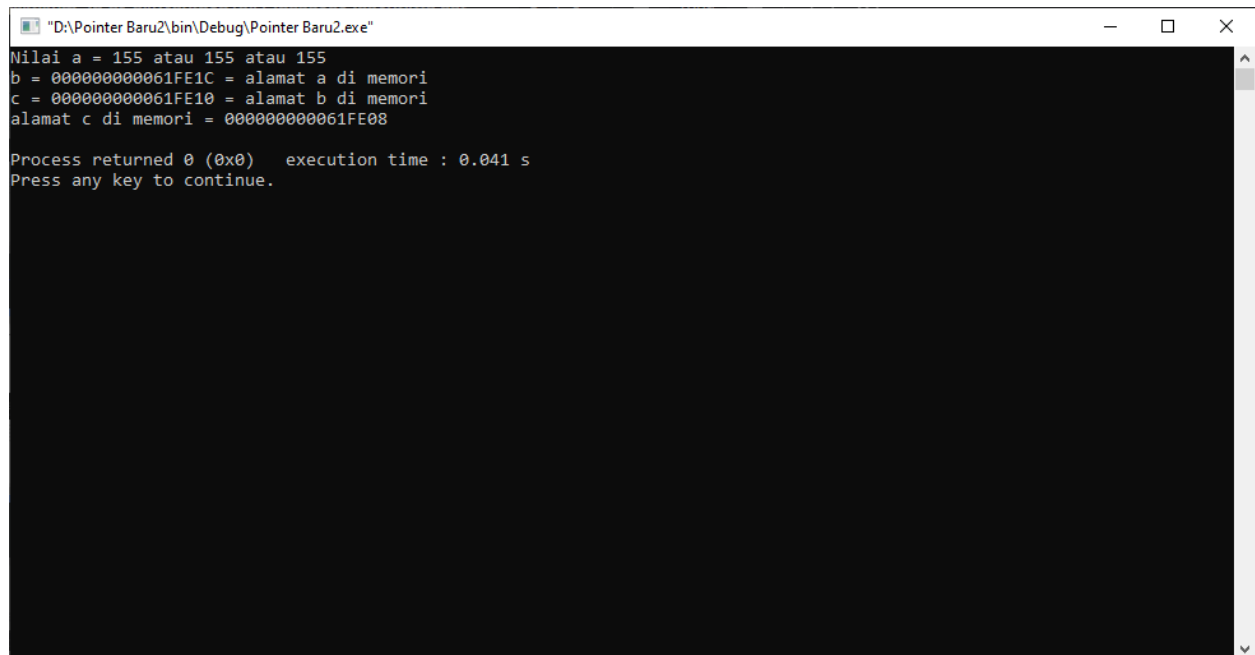

printf("Nilai a = %d atau %d atau %d\n", a, *b, **c);
printf("b = %p = alamat a di memori\n", b);
printf("c = %p = alamat b di memori\n", c);
printf("alamat c di memori = %p\n", &c);
}

```

Jawab :

| Variabel | Address  | Value    |
|----------|----------|----------|
| a        | 0060FEFC | 155      |
| b        | 0060FEF8 | 0060FEFC |
| c        | 0060FEF4 | 0060FEF8 |

Output :

```

D:\Pointer Baru2\bin\Debug\Pointer Baru2.exe
Nilai a = 155 atau 155 atau 155
b = 000000000061FE1C = alamat a di memori
c = 000000000061FE10 = alamat b di memori
alamat c di memori = 000000000061FE08

Process returned 0 (0x0)   execution time : 0.041 s
Press any key to continue.

```

3. Pointer yang menunjuk ke pointer yang lain.

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
main()
```

```
{
```

```
    int var_x = 273;
```

```
    int *ptr1;
```

```
    int **ptr2;
```

```
    ptr1 = &var_x;
```

```

ptr2 = &ptr1;
printf("Nilai var_x = *ptr1 = %d\n", *ptr1);
printf("Nilai var_x = **ptr2 = %d\n\n", **ptr2);
printf("ptr1 = &var_x = %p\n", ptr1);
printf("ptr2 = &ptr1 = %p\n", ptr2);
printf(" &ptr2 = %p\n", &ptr2);
}

```

Jawab :

| Variabel | Address  | Value    |
|----------|----------|----------|
| Var_X    | 0060FEFC | 273      |
| ptr1     | 0060FEF8 | 0060FEFC |
| ptr2     | 0060FEF4 | 0060FEF8 |

Output :

```

"D:\Pointer Baru3\bin\Debug\Pointer Baru3.exe"
Nilai var_x = *ptr1 = 273
Nilai var_x = **ptr2 = 273

ptr1 = &var_x = 000000000061FE1C
ptr2 = &ptr1 = 000000000061FE10
&ptr2 = 000000000061FE08

Process returned 0 (0x0) execution time : 0.074 s
Press any key to continue.

```

4. #include <stdio.h>

#include <stdlib.h>

main()

```

{
    int a, *b, **c;
    a = 1975;
    b = &a;
    c = &b;

```

```

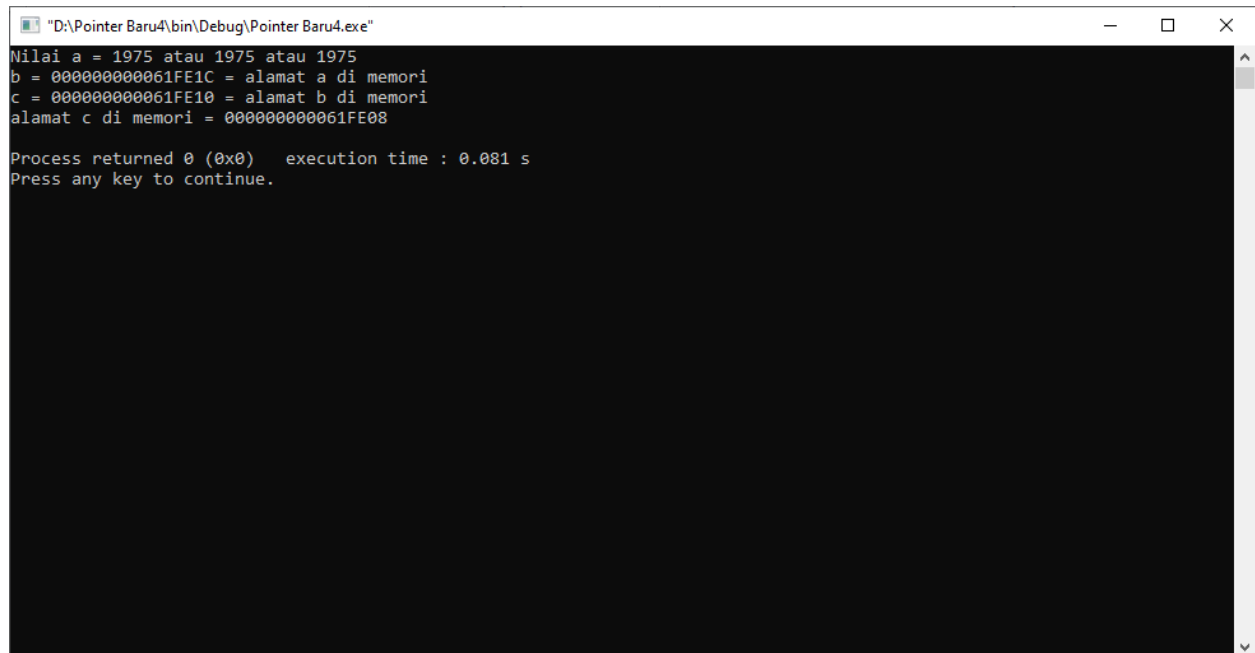

printf("Nilai a = %d atau %d atau %d\n", a, *b, **c);
printf("b = %p = alamat a di memori\n", b);
printf("c = %p = alamat b di memori\n", c);
printf("alamat c di memori = %p\n", &c);
}

```

Jawab :

| Variabel | Address  | Value    |
|----------|----------|----------|
| a        | 0060FEFC | 1975     |
| b        | 0060FEF8 | 0060FEFC |
| c        | 0060FEF4 | 0060FEF8 |

Output :

```

D:\Pointer Baru4\bin\Debug\Pointer Baru4.exe
Nilai a = 1975 atau 1975 atau 1975
b = 000000000061FE1C = alamat a di memori
c = 000000000061FE10 = alamat b di memori
alamat c di memori = 000000000061FE08

Process returned 0 (0x0)   execution time : 0.081 s
Press any key to continue.

```

5. Untuk potongan program di bawah ini, gambarkan ilustrasi alokasi memori dari setiap baris pernyataan yang diproses

```

int *i;
int j=10, k, m[]={2, 5};
int **l;
i = m;
i++;
*i = j;
j = *i;
i = &j;
k = *(&j);

```

l = &i;

Jawab :

| Variabel | Address  | Value                      |
|----------|----------|----------------------------|
| m[0]     | 0060FEEC | 2                          |
| m[1]     | 0060FEF0 | 5 10                       |
| i        | 0060FEFC | 0060FEEC 0060FEF0 0060FEF8 |
| j        | 0060FEF8 | 10 10                      |
| k        | 0060FEF4 | 10                         |
| l        | 0060FEE8 | 0060FEFC                   |

6. Tentukan setiap statemen di bawah ini benar atau salah. Jika salah sertakan alasannya.

Deklarasi :

int a[5] = {2,4,8,1,23};

int c = 5;

int \*ptr1 = &c;

int \*ptr2 = a;

| Statement               | Benar (beri tanda X) | Salah (beri tanda X) |
|-------------------------|----------------------|----------------------|
| a = c;                  |                      |                      |
| *c = 6;                 |                      |                      |
| a[2] = c;               |                      |                      |
| *ptr2 = c;              |                      |                      |
| &ptr1 = c;              |                      |                      |
| *(ptr2 + 1) = *(a + 3); |                      |                      |
| c = *(ptr2 + 1);        |                      |                      |
| c = &ptr1;              |                      |                      |
| c = a[3] + 2;           |                      |                      |

Jawab :

| Variabel | Address  | Value    |
|----------|----------|----------|
| a[0]     | 0060FEE8 | 2        |
| a[1]     | 0060FEEC | 4        |
| a[2]     | 0060FEF0 | 8        |
| a[3]     | 0060FEF4 | 1        |
| a[4]     | 0060FEF8 | 23       |
| C        | 0060FEE4 | 5        |
| ptr1     | 0060FEE0 | 0060FEE4 |
| ptr2     | 0060FEE8 | 0060FEE8 |

NB : 0060FEE4 = 5

0060FEE8 = 2

| Statement         | Benar | Salah | Alasan   |
|-------------------|-------|-------|--|
| a=c;              |       | X     | Karena variabel a adalah array dan c adalah variabel biasa. Value c tidak bisa langsung di assign ke variabel a, variabel a harus ditulis dengan indeksnya |
| *c=6;             |       | X     | Karena variable c bukan pointer  |
| a[2]=c;           | X     |       |  |
| *ptr=c;           | X     |       |  |
| &ptr1=c;          |       | X     | Karena value c tidak dapat diassign menjadi alamat pointer ptr1  |
| *(ptr2+1)=*(a+3); | X     |       |  |
| c=*(ptr2+1);      | X     |       |  |
| c=&ptr1;          |       | X     | Jika kita mencari value dari c menggunakan %d maka akan terjadi error karena alamat pointer tidak dapat diassign ke variable                               |
| c=a[3]+2;         | X     |       |  |
| *(ptr2+2)=*ptr1;  | X     |       |  |
